Hello,

I'm a Software Engineer with 10+ years at Google, where I've led engineering work across Ads, Cloud, Play, and YouTube. Most recently I lead conversion attribution systems that model how users interact with ads across Shopping, Search, Gmail, and YouTube — owning unification of conversion tracking signals, leading a team of five engineers on attribution-methodology research, and shipping privacy-preserving systems under the EU Digital Markets Act.

Earlier inside Google I worked on Cloud AI (Contact Center AI: conversational AI and topic modeling at enterprise scale), Google Play Search ranking (ML models and A/B experimentation against hundreds of millions of queries), and YouTube data pipelines for promotional-campaign analytics. Before Google I spent four years across Microsoft (Office 365 cloud infrastructure), Amazon (AWS billing and marketplace at scale), and VMware (vSphere).

I'm strongest in Python, Java, and C++, with hands-on production experience operating distributed systems, ML pipelines, and large-scale data platforms. I have an M.S. in Information Networking from Carnegie Mellon. I'm based in the Bay Area, open to relocation for the right role, and currently authorized to work in the U.S. on H1B (transfer required).

I'd love to learn more about the role and discuss how my background fits. Thank you for the consideration.

Best regards,

Sushanth Tiruvaipati
